MONTANA AIRPORTS PICK DIGIWX AWOS

Baltimore, MD – August 10, 2006. Three airports in Montana have installed the Belfort DigiWX® AWOS automated weather observation system this year. The airports are: Bowman Field (3U3), Anaconda, MT and Lincoln County airport (88M) in Eureka, MT.

Anaconda and Eureka use the DigiWX® as the primary weather reporting station supporting flight operations. The DigiWX® reports wind speed, wind direction and wind gusts, temperature, relative humidity, FAA certified altimeter and FAA certified visibility. The weather information is available to pilots over the airport Unicom, dial up telephone or user friendly graphic display. Additionally, the real-time airport weather information is available via the Web.

“Airports in Montana are discovering the cost effective approach to providing FAA certified weather (AWOS) for their pilots”, this according to Ralph F. Petragani, Director of Sales & Marketing for DigiWX®, he continues, “DigiWX fills the gap between just a wind sock and the maintenance laden, fully loaded AWOS IIP/T and without the need for a dedicated VHF frequency, the DigiWX® is placed into service that much quicker”. DigiWX® is a fully automated aviation weather observing and reporting system designed to support airborne and ground users operating aircraft under FAR Part 91 and Part 135 IFR regulations.
